Content Editor

The new and improved Blackboard Content Editor enables simple content creation through an easy to use interface. All of the essential functions you need are there but with great new enhancements. Copy and paste content directly from Microsoft Word. Work in full-frame mode for more real estate to build rich content. Create mathematic equations using the new mathML equation editor, which is screen-reader accessible. Finally, record video from your webcam using the Video Everywhere feature.

The new content editor is available anywhere you can type text in Blackboard, and students have all of the same tools. Think about students discussing equations on the Discussion Board, or submitting video reflections to a Journal!

Equation Editor

The new Equation Editor allows you to quickly and easily create mathematic equations and scientific formulas anywhere you can type text into Blackboard. The editor also supports saving and copy/paste of equations using mathML. Best of all, content created with the editor is screen-reader compatible, so it can be read by JAWS and other software in natural language.

Video Everywhere

With Video Everywhere, you can record video from your webcam directly into Blackboard. The videos are uploaded to YouTube as unlisted videos, so they can only be viewed in Blackboard. Once the videos are uploaded, you can add captions in YouTube to make the videos accessible. Note: You must have a Google account registered on YouTube to use Video Everywhere.
